SUMMARY

Senior Software Engineer with 4+ years building enterprise Salesforce applications and full-stack services in financial services. Author 750+ commits across 6 production repositories, delivering 120+ Jira stories spanning full-stack web, Salesforce/Apex, and Java backend services. Deep hands-on Salesforce development — Apex, Lightning Web Components, OmniStudio (OmniScripts, FlexCards), SOQL, and async Apex — complemented by Java 21/Spring Boot, React, AWS, and CI/CD. Acting Tech Lead across two teams, owning code reviews, Copado releases, and production support. "Exceptional Impact" (Prudential's top rating), 3 consecutive years.

SKILLS

Salesforce: Apex, Apex Triggers, LWC, OmniStudio (OmniScripts, FlexCards, DataRaptors, Integration Procedures), SOQL, Batch & Queueable Apex, Test Classes, Custom Settings/Metadata, Permission Sets/Roles, Copado

Backend: Java 21, Spring Boot 3, Spring AI, REST APIs, SQL, PostgreSQL/Aurora, DynamoDB

Frontend: React, TypeScript, JavaScript, HTML, CSS

Cloud & DevOps: AWS ECS/Fargate, CloudFormation, Secrets Manager, ALB, OIDC/Azure AD, Docker, Jenkins, GitHub Actions, CI/CD

Security: Passwordless auth, JWT/RS256, OAuth2/OIDC, DAST/pen-test remediation

Tools & Practices: Git, Jira, Agile/Scrum, Code Reviews, Production Support, Release Coordination, SonarCloud

EXPERIENCE

Senior Software Engineer — Prudential Financial, Group Insurance Technology | *May 2022 – Present*

Associate Software Engineer (2022) → Senior Software Engineer (2024); began leading the enterprise Salesforce platform team in 2025 as acting Tech Lead (~1.5 years).

- Lead the enterprise Salesforce platform team across two teams as acting Tech Lead — driving design decisions, owning production support, partnering with business/QA/product stakeholders, and mentoring and onboarding junior engineers through code review.
- Largest individual contributor on the enterprise Salesforce platform (470+ commits over ~2 years) — developing Group Insurance workflows with Apex, Lightning Web Components, and OmniStudio (OmniScripts, FlexCards, DataRaptors, Integration Procedures), SOQL, and test classes; scaled it to support new product lines.
- Build and tune asynchronous Salesforce processes with Batch Apex and Queueable Apex for high-volume data processing, tuning SOQL and heap usage to resolve performance and governor-limit issues.
- Support Salesforce production releases through Copado — coordinating recurring deployments, validating changes, resolving defects, and assisting with hotfixes and data corrections.
- Built an internal AI assistant (React + Spring AI on AWS Bedrock), used by business users for natural-language analysis of business data over enterprise data and ELK, as the single largest contributor (137 commits, 63% of total), deployed on AWS ECS/Fargate behind an ALB with ALB OIDC / Azure AD authentication and Jenkins CI/CD.
- Led development of a greenfield client onboarding platform spanning 3 integrated microservices — ~16,000 lines authored across 144 commits in under 5 weeks (Node/Express + React/TypeScript, Spring Boot/Java 21, PostgreSQL/Aurora on AWS ECS/Fargate) with passwordless authentication.

Mechanical Engineer — WTEC | *Feb 2020 – Nov 2021*

- Led design of a fabrication facility as project manager — AutoCAD mechanical drawings, CYMCAP cable simulations, specification sheets, and short-circuit reports.

EDUCATION

Dev10 Software Bootcamp — Genesis10, 2022 — full-stack application (React, Spring Boot, MySQL, AWS)

B.S. Mechanical Engineering — New Jersey Institute of Technology, 2020 — GPA 3.6, Cum Laude

A.S. Engineering Science — Passaic County Community College, 2017 — GPA 3.8, Engineering Science Highest Award
