Senior Software Engineer · Technical Leadership — Platform, Full-Stack, and Applied AI

SUMMARY

Senior Software Engineer with acting Technical Lead experience — 4+ years in enterprise financial services: Java 21/Spring Boot REST services, React/TypeScript front ends, AWS deployment, and ownership of a large Salesforce platform. Led 7 engineers across two teams; authored 750+ commits across 6 production systems and delivered 120+ Jira stories. Three consecutive "Exceptional Impact" ratings — Prudential's highest performance designation — 2023–2025.

SKILLS

Languages: Java 21, TypeScript, JavaScript, Apex, SQL, SOQL

Frameworks & Platforms: Spring Boot 3, Spring AI, React, Next.js, Node/Express, Salesforce (Apex, Lightning Web Components, OmniStudio, Batch/Queueable Apex)

Cloud & Infrastructure: AWS (ECS/Fargate, ALB, CloudFormation, Secrets Manager, Amazon Bedrock, DynamoDB), Cloudflare (Workers, D1, Access), Docker

Data & Integration: PostgreSQL/Aurora, DynamoDB, SQLite, REST APIs, service-to-service integration, schema migrations, Elasticsearch/Logstash/Kibana (ELK)

AI & Developer Tooling: Amazon Bedrock (Claude Sonnet 4.5), Spring AI, Cloudflare Workers AI, LLM application design (system prompts, retrieval over curated context, output guardrails), Claude Code, Codex, Model Context Protocol (MCP)

Security & Delivery: OAuth2/OIDC, Azure AD, JWT/RS256, passwordless authentication, DAST/pen-test remediation; CI/CD (Jenkins, GitHub Actions, Copado), code review, release coordination, production support, Agile/Scrum

EXPERIENCE

Senior Software Engineer / Acting Technical Lead — Prudential Financial, Group Insurance Technology | February 2022 – June 2026

Employer of record: Genesis Corp, February 2022 – June 2023, on assignment within Prudential Group Insurance Technology; direct Prudential employment June 2023 – June 2026. Software Engineer through the contract period; Senior Software Engineer 2024; acting Technical Lead 2025.

- Led 7 engineers across two teams as acting Technical Lead — owning architecture and design decisions, translating Group Insurance business requirements into technical plans, coordinating delivery with product owners and QA, and mentoring 3 of them through code review.
- Led architecture and delivery of a greenfield client onboarding platform — three integrated microservices (Node/Express with React/TypeScript, Spring Boot/Java 21, PostgreSQL/Aurora on AWS ECS/Fargate), ~16,000 lines across 144 commits in under five weeks — and designed its passwordless authentication flow (one-time link, email match, OTP, RS256-signed session) on a stateless, autoscaling topology built to enterprise CIAM and pen-test requirements.
- Served as the top contributor (137 commits, 63% of its commits) on an internal AI client-assist assistant answering business users' natural-language questions about client detail — Salesforce data streamed into Elasticsearch, a Spring AI backend on Amazon Bedrock, and a React front end on AWS ECS/Fargate behind an ALB with OIDC/Azure AD and Jenkins CI/CD.
- Delivered Java Spring Boot REST services and service-to-service integrations, including a DynamoDB-backed document-generation service — co-led through QA — that replaced a manual contracts process.
- Served as the largest individual contributor to the enterprise Salesforce platform serving ~250 Group Insurance users — 470+ commits over ~2 years — scaling it for new product lines with Apex, Lightning Web Components, OmniStudio, and SOQL; owned recurring Copado releases and resolved high-volume data-processing failures via asynchronous Apex and SOQL/heap tuning.

Mechanical Engineer — WTEC | February 2020 – November 2021

- Project manager for a fabrication-facility design — AutoCAD drawings, CYMCAP cable simulations, short-circuit reports.

SELECTED PROJECTS

AI Client-Assist Assistant — enterprise client-insight assistant over an ELK retrieval pipeline (*enterprise work, described generically*) — let business users query client detail in natural language without consuming a Salesforce read-only license: Logstash streams Salesforce records into Elasticsearch, and a Spring AI/Spring Boot backend reasons over those indices with Claude Sonnet 4.5 on Amazon Bedrock, served through React on AWS ECS/Fargate behind an ALB with OIDC/Azure AD. *Spring AI, Amazon Bedrock, Elasticsearch/Logstash/Kibana, Salesforce, React, ECS/Fargate.*

Ask Fredrik — LLM assistant on Cloudflare Workers · eriksson008.github.io/professional-portfolio/ — recruiter-facing assistant: five-stage answer pipeline (rate limit, topic filter, curated matcher, Workers AI, deterministic fallback) with a prompt-leak guard; D1 question log and a private dashboard behind Cloudflare Access with in-Worker RS256 JWT verification. 400+ automated checks in CI. *Cloudflare Workers, Workers AI, D1, Access, TypeScript, React.*

EDUCATION

Dev10 Software Bootcamp — Genesis10, 2022 — full-stack application (React, Spring Boot, MySQL, AWS)

B.S. Mechanical Engineering — New Jersey Institute of Technology, 2020 — GPA 3.6, Cum Laude

A.S. Engineering Science — Passaic County Community College, 2017 — GPA 3.8, Engineering Science Highest Award
