Senior Software Engineer · Technical Lead — Platform, Full-Stack, and Applied AI

SUMMARY

Senior Software Engineer and acting Tech Lead, 4+ years in enterprise financial services: Java 21/Spring Boot services and REST APIs, React/TypeScript front ends, AWS deployment, and ownership of a large Salesforce platform. Author of 750+ commits across 6 production systems and 120+ delivered Jira stories. Three consecutive "Exceptional Impact" ratings — Prudential's highest — 2023–2025.

SKILLS

Languages: Java 21, TypeScript, JavaScript, Apex, SQL, SOQL

Frameworks & Platforms: Spring Boot 3, Spring AI, React, Next.js, Node/Express, Salesforce (Apex, Lightning Web Components, OmniStudio, Batch/Queueable Apex)

Cloud & Infrastructure: AWS (ECS/Fargate, ALB, CloudFormation, Secrets Manager, Amazon Bedrock, DynamoDB), Cloudflare (Workers, D1, Access), Docker

Data & Integration: PostgreSQL/Aurora, DynamoDB, SQLite, REST APIs, service-to-service integration, schema migrations, ELK

AI & Developer Tooling: Amazon Bedrock, Spring AI, Cloudflare Workers AI, LLM application design (system prompts, curated context, output guardrails), Claude Code, Codex, Model Context Protocol (MCP)

Security & Delivery: OAuth2/OIDC, Azure AD, JWT/RS256, passwordless authentication, DAST/pen-test remediation; CI/CD (Jenkins, GitHub Actions, Copado), code review, release coordination, production support, Agile/Scrum

EXPERIENCE

Senior Software Engineer (Acting Tech Lead) — Prudential Financial, Group Insurance Technology | *May 2022 – Present*

Associate Software Engineer (2022); Senior Software Engineer (2024); acting Tech Lead since 2025 (~1.5 years).

- Lead the enterprise Salesforce platform team across two engineering teams as acting Tech Lead — owning architecture and design decisions, translating Group Insurance business requirements into technical plans, coordinating delivery with product owners and QA, and mentoring junior engineers through code review.
- Led architecture and delivery of a greenfield client onboarding platform — three integrated microservices (Node/Express with React/TypeScript, Spring Boot/Java 21, PostgreSQL/Aurora on AWS ECS/Fargate), ~16,000 lines across 144 commits in under five weeks — and designed its passwordless authentication flow (one-time link → email match → OTP → RS256-signed session) on a stateless, autoscaling topology built to enterprise CIAM and penetration-test requirements.
- Top contributor (137 commits, 63% of its commits) on an internal AI assistant answering business users' natural-language questions over enterprise data and ELK search — React front end, Spring AI backend on Amazon Bedrock, on AWS ECS/Fargate behind an ALB with OIDC/Azure AD access and Jenkins CI/CD.
- Deliver Java Spring Boot REST services and service-to-service integrations, including a DynamoDB-backed document-generation service — co-led through QA — that replaced a manual contracts process.
- Largest individual contributor to the enterprise Salesforce platform (470+ commits over ~2 years), scaling it for new product lines with Apex, Lightning Web Components, OmniStudio, and SOQL; own recurring Copado releases and resolve high-volume data-processing failures through asynchronous Apex and SOQL/heap tuning.

Mechanical Engineer — WTEC | *Feb 2020 – Nov 2021*

- Project manager for a fabrication-facility design — AutoCAD drawings, CYMCAP cable simulations, and short-circuit reports.

SELECTED PROJECTS

Ask Fredrik — LLM assistant on Cloudflare Workers · eriksson008.github.io/professional-portfolio/ — recruiter-facing assistant whose answers route through a five-stage pipeline (rate limit, sensitive-topic filter, curated matcher, Workers AI call, deterministic fallback) with a prompt-leak guard; questions logged to D1, and a private dashboard gated by Cloudflare Access with in-Worker RS256 JWT verification. 400+ automated checks in CI. *Cloudflare Workers, Workers AI, D1, Access, TypeScript, React.*

Homebase — household bill and account platform — two-user production PWA owned end to end: forward-only D1 migrations, a daily cron reminder job, Cloudflare Access identity, a self-only Content Security Policy, and GitHub Actions deploys; 173 tests run in the workerd runtime that serves production. *Cloudflare Workers, D1 (SQLite), Wrangler, Vitest.*

EDUCATION

Dev10 Software Bootcamp — Genesis10, 2022 — full-stack application (React, Spring Boot, MySQL, AWS)

B.S. Mechanical Engineering — New Jersey Institute of Technology, 2020 — GPA 3.6, Cum Laude

A.S. Engineering Science — Passaic County Community College, 2017 — GPA 3.8, Engineering Science Highest Award
